

GERMAN WATER PARTNERSHIP

Your gateway to German excellence – direct, precise and competent!

A Common Challenge

One of the core challenges for mankind—today and in the future—is the responsibly handle of our water resources. The world's growing population and the steadily increasing agricultural and industrial production clearly calls for a highly efficient and sustainable use of our resources.

In addition to the industrialised nations, developing countries and emerging markets are particularly in need of efficient and innovative solutions in every area of water management. German Water management helps to overcome these challenges, at home and worldwide.

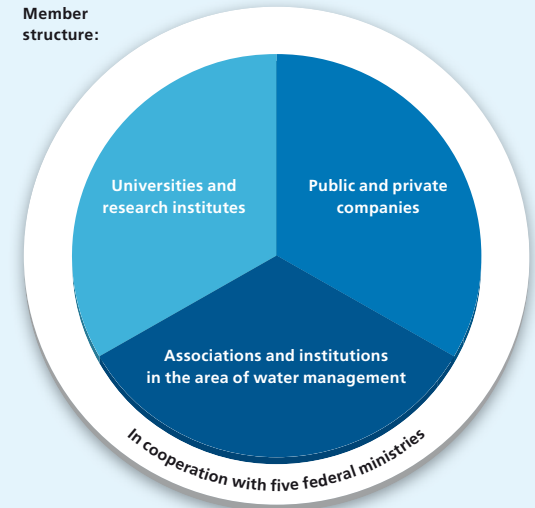

German Excellence

The specific strength of the German water sector is based on its innovative, flexible and value-guided network of players, composed of highly specialised firms and institutions across the entire value chain. German entrepreneurs, engineers, developers and researchers are used to working seamlessly in multi-disciplinary consortia—always dedicated to delivering individually adapted, long-lasting solutions.

Apart from their state-of-the-art and technical know-how, one particular advantage of working with German players is their strength in designing integrated solutions. Product Integrated Environmental Protection and Integrated Water Resource Management (IWRM) are not distant goals, but a reality in Germany today. Our customers and partners around the world can trust in our longstanding experience and integrated solutions.

Member structure:

Member of
German Water Partnership

This brand identifies our qualified members.

German Water Partnership is a network of excellence, composed of partners dedicated to a mutual set of values and objectives.

Guiding values

- Quality
- Innovation
- Flexibility
- Cooperation
- Responsibility
- Clean business

Common objectives in providing services for the utilisation of water resources

- Sustainable use
- Secure supply
- Efficient treatment
- Capacity development

As result, our international clients will benefit from **highest quality engineering services, concerted and value guided action and cutting edge technology.**

In cooperation with five federal ministries

- AA Federal Foreign Office
- BMBF Federal Ministry of Education and Research
- BMU Federal Ministry of Environment, Nature Conservation and Nuclear Safety
- BMWi Federal Ministry of Economics and Technology
- BMZ Federal Ministry for Economic Cooperation and Development

German Water Partnership – The One-Stop-Shop

In April 2008, private and public firms, research institutes and water sector associations and institutions teamed up with the support of federal ministries and founded the “German Water Partnership” network. This network acts as a central coordination office for foreign clients and decision makers seeking German expertise in the water sector.

The members of the German Water Partnership are dedicated to a set of guiding values and common objectives when providing services to their international clients and partners. The German Water Partnership is the One-Stop-Shop for individual solutions and quality services “Made in Germany”.

Put us to the test. We’ll identify the right partners for you – directly, precisely and competently!

Our four guiding principles:

- Sustainable Use
- Secure Supply
- Efficient Treatment
- Capacity Development
