## Self-Powered Smart Water Networks For Smart Asset Management

**PYDROs self-powered sensing solution for real-time monitoring offers smart asset management and precise leak location by using flow data in virtualized DMAs and thus reducing leakage time and saving money.**

- › Self-powered solution: Independent from external power supplies!
- › Interconnected device: IoT via LTE, LoRa, Sigfox, NBIoT, mioty ...
- › Real-time data transmission to any cloud-based monitoring system
- › Multi-sensor platform: Integrated flow, pressure and temperature
- › Robust design and very low maintenance

Pydro's self-powered solutions decrease the time needed to detect and locate leaks, minimizing risk of damage to the infrastructure.

Generate data wherever you want. Power Up your Smart-Water-Network.
